MTX

HIGH PERFORMANCE ROAD BRAKING

FLOATING DISCS

MTX floating rotors are made from two segments of stainless steel which are riveted together to allow the outer section of stainless steel to expand under extreme temperatures. The outer section is manufactured from Japanese SUS 420 stainless steel, then heat-treated to HRC 36+-2 while the centre of the rotor is manufactured from steel or alloy.

SOLID DISC ROTORS

MTX solid rotors are constructed using one complete segment of SUS 420 stainless steel, then heat-treated to HRC 36+-2. Lightening and drill hole patterns are as per OEM designs to improve braking performance and reduce the temperature of the rotor.

MTX

HIGH PERFORMANCE OFF-ROAD BRAKING

FLOATING DISCS

MTX floating rotors are made from two segments of stainless steel which are riveted together to allow the outer section of stainless steel to expand under extreme temperatures. The outer section is manufactured from Japanese SUS 420 stainless steel, then heat-treated to HRC 36+-2 while the centre of the rotor is manufactured from steel or alloy.

SOLID DISC ROTORS

MTX solid rotors are constructed using one complete segment of SUS 420 stainless steel, then heat-treated to HRC 36+-2. Lightening and drill hole patterns are as per OEM designs to improve braking performance and reduce the temperature of the rotor.

MTX

HIGH PERFORMANCE ATV & QUAD BIKE BRAKING

FLOATING DISCS

MTX floating rotors are made from two segments of stainless steel which are riveted together to allow the outer section of stainless steel to expand under extreme temperatures. The outer section is manufactured from Japanese SUS 420 stainless steel, then heat-treated to HRC 36+-2 while the centre of the rotor is manufactured from steel or alloy.

SOLID DISC ROTORS

MTX solid rotors are constructed using one complete segment of SUS 420 stainless steel, then heat-treated to HRC 36+-2. Lightening and drill hole patterns are as per OEM designs to improve braking performance and reduce the temperature of the rotor.

MTX REPLACEMENT REGULATOR RECTIFIER

A motorcycle regulator rectifier is part of the battery charging system, and as the name implies regulates the voltage across a motorcycle to save working ranges. Typically a rectifier is fed AC power generated from the stator coils of the generator (alternator) and converts it to DC power whilst, at the same time, limiting the voltage to a maximum of about 14.5 volts.

MTX's range of OE replacement rectifiers are designed to directly replace faulty or broken OE componentry, with all the same connectors as your OE components, they are simply 'plug-and-play' replacements.

- Direct Replacement
- Plug and Play with OE connectors included
