### ATLAS VISION ADULT ANTI COMPRESSION COLLAR

The Vision anti-compression collar is the "front only chest protector" of the neck protection world. A device designed for one specific purpose, void of anything that doesn't contribute to that single job. This complete overhaul of the neck protection category leapfrogs the competition with a simplified minimalist form, addition of advanced and proven materials, and the biggest improvement in user experience since the birth of neck protection.

By only being built up over the shoulders, the Atlas Vision aims to reduce compression forces only. By removing the traditional front and rear "shelves" of a neck brace, range of motion is increased enabling us to provide an option for anyone who struggles to wear a traditional full-frame neck brace.

### ATLAS AIR LITE ADULT FULL NECK BRACE

A stripped down version of our iconic Air Brace, the Air Lite comes with the lower shoulder pads\*, and injection molded nylon rear mounts which enables an even better value while retaining all that you know and love - The combination of a simplistic minimalist design with flexibility, suspension, and the largest brace-to-body contact ratio. The Atlas family of braces are the clear category leader across the entire range.

27% More Body Contact

Each Atlas Brace is the smallest overall size compared to the competition, but contacts your body 27% more than the competition - making it smaller, and bigger. Increased surface area contact with the body helps spread out impact forces, with the intent of making their effects less noticeable and/or helping to potentially prevent secondary injuries

Ideally suited for repacking non-uniform shaped cans such as oval and tri-oval, which can be tricky to repack correctly with standard materials.

Easy to use;

- Available in 3 lengths to suit most popular exhaust sizes (length can also be trimmed for precision)
- No need to use stainless steel wool to cover the perforated pipe
- Simply wrap sheet around the perforated pipe and cut to attain the required fill volume (each sheet is 1M wide)

Material benefits;

- Higher temperature resistance (up to 1000°C), eliminating need for s/s wool
- High resistance to High Pulse Compacting
- Increased sound absorption compared to traditional materials
- Improved thermal insulation - reduced need for internal or external heat shields
- More efficient than conventional needle mat or blown-in fibre products
